WORKS

PUBLISHED BY

JAMES CARPENTER AND SON, OLD BOND STREET.

ARCHITECTURE.

A NEW VITRUVIUS BRITANNICUS. By P. F. Robinson, Architect, F. S. A. Part I. Imperial Folio. Price 3*l.* 3*s.* India Proofs, 5*l.* 5*s.* Containing the History and Antiquities of Woburn Abbey, a Seat of his Grace the Duke of Bedford. Illustrated by Ground Plans, Elevations, Interior and Scenic Views.

*** Part II. containing Hatfield House, the Seat of the Marquess of Salisbury, will appear in the course of the present Season.

NEW EDITIONS OF THE FOLLOWING POPULAR WORKS,

By P. F. ROBINSON, Architect, F. S. A.

1. RURAL ARCHITECTURE; or, A Series of Designs for Ornamental Cottages, Lodges, Dairies, &c. 4to. Price 3*l.* 3*s.*

2. A SERIES OF DESIGNS FOR ORNAMENTAL VILLAS. Royal 4to. Price 4*l.* 4*s.*

3. A SERIES OF DESIGNS FOR FARM BUILDINGS. Royal 4to. Price 2*l.* 2*s.*

4. VILLAGE ARCHITECTURE; consisting of Designs for the Village Inn, School House, Alms Houses, Town Hall, Market House, Parsonage, &c. Royal 4to. Price 1*l.* 11*s.* 6*d.*

"Mr. Robinson is so well known by his Rural Architecture, and other works, that it is only necessary to add that this work is well calculated to increase his justly deserved celebrity."—*Gentleman's Magazine*, Jan. 1831.

DESIGNS FOR VILLAS IN THE ITALIAN STYLE OF ARCHITECTURE, on a moderate Scale of Expense. By Robert Wetten, Architect. Royal 4to. Price 1*l.* 16*s.*

DESIGNS FOR VILLAS, on a moderate Scale of Expense, adapted to the Vicinity of the Metropolis and large Towns. By J. G. Jackson. 4to. Price 1*l.* 11*s.* 6*d.*

ON THE LANDSCAPE ARCHITECTURE OF THE GREAT PAINTERS OF ITALY. Illustrated by Fifty-five Plates. 4to. By G. L. Meason, Esq.

"In this Volume (of which it appears that only one hundred and fifty copies have been printed for private circulation), one of the most interesting and important branches of the Fine Arts, *Architecture*—is taken up in a very novel manner, and is admirably treated, not only as connected with another branch of the Fine Arts, Painting—but with reference to its own origin, qualities, and effects."—*Literary Gazette.*

*** Carpenter and Son have a few Copies of this Work on sale.

IN THE PRESS.

UNDER THE PATRONAGE OF HIS MOST GRACIOUS MAJESTY

WILLIAM THE FOURTH.

A SERIES OF VIEWS

IN THE

MAURITIUS, OR ISLE OF FRANCE;

To be Drawn on Stone by William Rider, of Leamington; from Original Drawings, by T. Bradshaw, Esq. late of his Majesty's Civil Service in the Mauritius. Accompanied by a Memoir of the Island, and Letter-press Descriptions of each View.

CONDITIONS.

The Work shall be produced in the first style of Lithography, of the Imperial Quarto size.

Each Part will contain Four Views, with Letter-press Descriptions annexed. Part I. to appear on the 1st of February, 1831; and the succeeding Parts shall be produced at intervals not exceeding two months. A very limited number of Copies shall be printed; after which the Stones shall be destroyed, that no inferior impressions may ever exist.

The Work shall be completed in Ten Parts, constituting, when complete, a handsome volume. The Price to Subscribers will be Half a Guinea each Part, to be paid for at the time of delivery. Proof Impressions, on India Paper, Fifteen Shillings.

A List of the Subscribers will be given with the last Number.

NEW WORKS

PUBLISHED BY

JAMES CARPENTER AND SON, OLD BOND STREET.

FINE ARTS.

A SERIES OF SUBJECTS FROM THE WORKS OF THE LATE R. P. BONINGTON. Lithographed by J. H. HARDING. Atlas 4to. Price 2*l.* 10*s.* Proofs, 3*l.* 8*s.*

"The reviewing of these Sketches, as they have made their appearance at various intervals, has been to us like so many green spots in the monotonous waste of criticism. They all betray the quick and investigating eye, the rapid and energetic hand, and the plastic power of a varied genius. The whole collection has been beautifully lithographed by Harding."—*Atlas.*

THE FISH MARKET; from a Picture by the late R. P. BONINGTON; engraved in Mezzotinto by J. P. QUILLEY. Size of the Plate 20½ inches by 13½. Prints, 1*l.* 1*s.* Proofs, 1*l.* 11*s.* 6*d.*

New Edition, in 4to. Price 3l. 3s.

BURNET'S PRACTICAL HINTS ON PAINTING. Illustrated by nearly One Hundred Etchings from celebrated Pictures of the Italian, Flemish, and Dutch Schools.

"The library of no lover of the fine arts can henceforward be considered complete without Mr. Burnet's work."—*Literary Gazette.*

*** The Parts may be had separately, viz. On Composition, 15*s.*; On Light and Shade, 18*s.*; On Colour, 1*l.* 11*s.* 6*d.*

†† A few Copies remain of the Large Paper, with India Proofs of the Plates, and a Portrait of the Author. French boards, and lettered, 6*l.* 6*s.*

THE COSTUMES OF THE FRENCH PYRENEES, Parts I. II. and III. Quarto, coloured, price 12*s.* each. Drawn on Stone by J. D. HARDING, from Sketches by J. JOHNSON, Esq. To be completed in Six Parts.

A BIOGRAPHICAL AND CRITICAL DICTIONARY OF PAINTERS AND ENGRAVERS, from the Revival of Painting and the alleged Discovery of Engraving by Finiguerra. By MICHAEL BRYAN. In Two thick Quarto Volumes. Price 5*l.* 5*s.* Large Paper, 9*l.*

"We congratulate the lovers of the Fine Arts on the appearance of this important publication. The work, a great improvement as well as an enlargement of Pilkington's design, is evidence of the diligence and talents of the author, which will hand down his name with distinction to the latest posterity."—*Literary Gazette.*

VISIONS OF AN AMATEUR; being a Collection of Forty-two Etchings. By Sir JAMES STUART, Bart. In a Portfolio. Price 3*l.* 13*s.* 6*d.*

"These etchings are chiefly of a chivalrous and romantic character, several of them are illustrations of Scott and Byron. The story of Mazeppa, for instance, is very spiritedly told."—*Literary Gazette.*

A SERIES OF VIEWS OF POMPEII; Drawn on Stone by HARDING, from Drawings by WILLIAM LIGHT, Esq., late on the Staff of the Army under the Duke of Wellington. Folio. Price 3*l.* 10*s.* Proofs, 4*l.* 14*s.* 6*d.*

"These views give an excellent idea of this remarkable relic of antiquity, buried for so many centuries under volcanic ashes. The execution of the plates does both Colonel Light and Mr. Harding great credit. Every plate is accompanied by a brief letter-press description."—*Literary Gazette.*

WELLS'S TREATISE ON ANATOMY AND PROPORTIONS OF THE HUMAN FIGURE; particularly calculated for the Use of Ladies. Quarto, with Copper Plates. Price 5*s.*

RURAL ARCHITECTURE.

PREFACE TO THE THIRD EDITION.

The extraordinary sale of this little Work, originally published in the year 1822, and now demanding a Third Edition, has certainly far exceeded my expectations; and I own that the success attending my exertions to restore a species of Architecture, till now sadly neglected and almost forgotten, has been of a most gratifying nature. In reprinting the Work most of the Plates have been redrawn upon the stone, and as the art of Lithography has considerably improved since the publication of the original Work, I have reason to hope that this new Edition will be at least equal to the first in point of interest. The attention which has been bestowed upon this reprint, has delayed the production of my Work on Farm Buildings, but as all the subjects are composed, this will now regularly go forward to its completion.

95. Side Elevation.
96. Perspective View.

DESIGN, No. I.

The Design, of which Plate No. I. exhibits the Ground Plan, consists of an Entrance Porch, a Parlour, Kitchen, Out-house, and Cellar, with three Rooms above. It has been erected as a Gate Lodge; and was built of brick, roughcasted, and coloured, with stone quoins, and dressings to the Windows and Doorways. The external timbers are painted to resemble oak, and the Roof is thatched with reed. The Gables are enriched with pendants and ornamental barge boards. The Leanto is supported by rude uprights of oak, placed on stone plinths, having branches in short lengths nailed against them: creepers are trained up these posts.

The Plates No. II. and III. are geometrical Elevations of two Fronts, and No. IV. a perspective view of this Design.

DESIGN, No. II.

This Cottage has also been erected as a Gate Lodge, and consists of a Porch, Parlour, Kitchen, and Cellar, with three Rooms above. It was built of stone, with squared stones at the angles. The circular shafts of the Chimneys are erected in brick work, and the Ornaments executed in Roman cement. The Roof is covered with stone; and the Gables finished in the same manner as Design No. I.

DESIGN, No. III.

As it is the Author's wish to prove in the course of the present Work that the humblest Dwelling may be erected, by a proper management of the materials, so as to produce a pleasing effect, and at the same expense as the common-place, and ill-shaped Structures now so invariably seen in all parts of the Country; he purposes giving designs of the simplest form and construction, thence gradually rising to those of more consequence. In the choice of the materials, the rudest should be selected as best adapted to the means of the Cottager. Thus unhewn stone, shaped only at the angles with a sparing hand; pebble fronts, or roughcast, may be properly applied, with oak, formed and fitted to its place by the axe alone. The mere Woodman is the best artificer for the Cottage, and thus expense in wages is saved. External painting should be made to resemble oak, and no other colour used.

The Design No. III. is one Story only in height. It was erected for a Gamekeeper, and contains a Kitchen, Parlour, Bedroom, and Outhouse. It was built of stone, and is covered with a stone Roof.

DESIGN, N° 3.

London. Pub. by Rodwell & Martin, New Bond St. Mar 1. 1822.

DESIGN, No. IV.

This Building was erected for a Bailiff, having a family. It contains a Kitchen, Parlour, Cellar, Outhouse, and Milkhouse, with an entrance Porch on the Ground Floor, and three Chambers above. Although some ornament is applied externally, the whole may be formed by the hand of the Labourer with a little instruction. The Awning is covered with split oak shingles, the ends being rounded by the saw, and a mould being previously cut, the Workman quickly produces an effect, which is very pleasing. An objection may probably be raised to the ornamental shafted Chimney, and it is true that this creates some labour, but a little practice will conquer any difficulty which may at first appear, and the effect will amply pay for this additional labour. Bricks formed in moulds to different patterns are easily applied to circular and octangular shafts.

DESIGN N°4.

London Pub.d by Rodwell & Martin, New Bond St. Mar.h 1.st 1822

DESIGN, No. V.

This Plan affords accommodation for a family. It was erected as a Farm House, and it contains a Porch, Parlour, Bed Room, Kitchen, Milk House, and Cellar, on the ground floor, with three Bed Chambers above. As the Chimney is a feature of considerable importance in cottage architecture, an outline is here given exhibiting its proportions, with a slight awning or leanto around its base. The situation of the windows will make this plan equally applicable as a Gate Cottage.

DESIGN, N.° 5.

DESIGN, No. VI.

As regularity of design has its advocates, a plan is here given, having a Central Porch, a Parlour on each side, with a Kitchen and Out-house, in the back front, as leanto buildings. It was erected as a Farm House, and it contains three Chambers above, one being over the Porch. The Roof is thatched with reed, carefully bound at the ridge and at the eaves, and if this is done by an expert hand, a pleasing effect is produced. The hinges and handle to the door and shutters should be a little in the style of those at Iffley Church, in Oxfordshire; South Weald Church, Essex; or Barfreston, in Kent; so admirably explained in Britton's Architectural Antiquities.

DESIGN N° 6

DESIGN, No. VII.

This Design is of a very humble description, comprehending only a Sitting Room fifteen feet by twelve, with a Bedroom over, and a Leanto, Out-house, or Kitchen. It was built as a Gate Cottage, of brick, roughcasted, with stone quoins and stone dressings to the windows and doors. The Roof is thatched with reed.

The form and size of the mullion is of considerable importance in giving the Cottage Window its peculiar character; in most modern buildings the moulding is too light, and the Sash-frame is upon the same surface with the wall, the effect is consequently mean, as little, or no shadow is projected, and the whole wants depth and solidity. The water table also is in this case wanting, a feature of much value in perfecting the Window.

DESIGN, No. VIII.

As the Author has frequently been asked for some Designs for Swiss Cottages, he proposes occasionally to introduce them in this work, having studied the buildings of that Country, on his return from Italy, in the year 1816.

They are built of timber, on a foundation of stone, and fancifully ornamented by colour, the general face of the building being left without any painting. The Roofs frequently project six and even eight feet, supported by ornamental brackets; they are covered with oak shingles, and are usually loaded with fragments of rock, to prevent the wind from lifting the roof, which might otherwise be the case, in consequence of this great projection. The external Stair, or Ladder, and the small Galleries close under the eaves of the roof, give a particular air, or character, to these Cottages.

DESIGN. N.º 8.

DESIGN, No. IX.

The Farm House, of which a plan is given in Plate No. 33, contains two Parlours, sixteen feet by twelve, a Kitchen, thirteen feet by eight feet six inches, a Scullery, and a Staircase, with three rooms above. It is built of stone, the quoins being worked, as well as the dressings to the Windows and Doors, the Cornices and Chimney Shafts. A due regard being paid to the proportions of the component parts, this Design produces a pleasing effect, and in a country where the material and labour is cheap, it will not prove by any means an expensive building.

DESIGN, No. X.

The plan, represented in Plate No. 37, was intended for a Parsonage. It contains two Parlours, communicating by folding doors, fourteen feet by twelve each, and ten feet in height. A Kitchen and Scullery, with a Porch, seven feet by five feet six inches, opening to a Staircase, seventeen feet six inches by eight feet, with three rooms above. The building was intended to have been erected in stone, with an ornamental niche and canopy, and enriched chimney stacks, in order to create effect in different points of view.

DESIGN, No. XI.

As economy is of the first consideration in erecting Cottages; a considerable advantage arises from building two, or more together. In doing this, care should be taken in arranging the plan, to keep the entrances as far apart as possible, in order to avoid the little quarrels which perpetually ensue, when they are connected. In the plan for the double Cottage, Plate 41, it may be observed this has been attended to, and although connected, each inhabitant is to a certain degree independent of his neighbour. Each dwelling comprehends a Parlour, Kitchen, Out-house, and Staircase, with three Rooms above, and every regard has been paid to comfort, in the arrangement of the apartments; another advantage arising from the double Cottage is, that it admits of more features, and consequently more picturesque effect in composing the Elevation than the single one can produce.

DESIGN. N.o III.

Pub.d by Carpenter & Son Old Bond Street 1828

DESIGN, No. XII.

The plan, No. 45, contains six Almshouses attached. The common mode of erecting buildings of this description is to make one line, or row, with the doors connected; by the plan proposed, each dwelling has its entrance apart, and as the disposition affords small internal areas or gardens, the turf stacks may there be placed, allowing the space before the Houses to be kept clean and neat. Each dwelling comprehends a Room twelve feet square, and a second twelve by eight, on the Ground floor, with two Rooms above.

DESIGN XIII.

The plan No. 49 comprehends four connected Cottages, or Alms Houses, each containing a Kitchen, twelve feet by eleven, and a Bed-room twelve feet square, with two Bed-rooms of the same size above. The Chimnies are brought together in the centre.

As each front presents the same elevation, (exhibited in plate No. 50.) a drawing of a Cottage Door and Window to a large scale is given in plate No. 51., in order to shew the proportions of the component parts. These are figured, and may help the workman in carrying the design into effect.

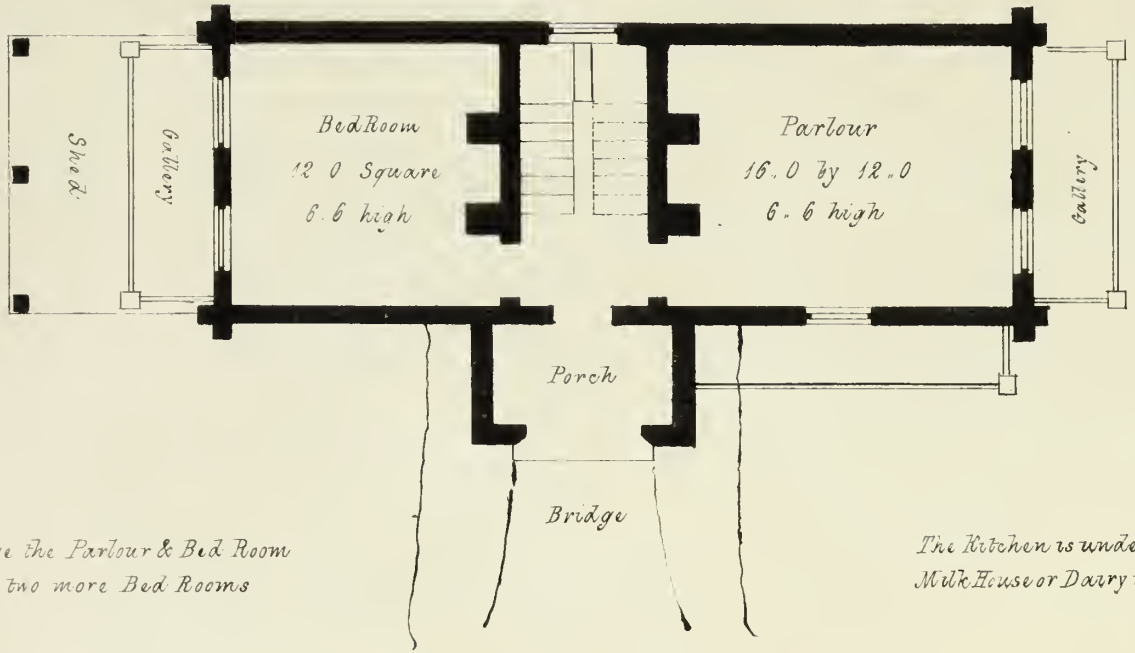
DESIGN XIV.

THE Swiss Farm House, frequently contains buildings of every description under the same roof, comprehending even the Stabling, Cart-standings and Granary; and it is not unusual to see the Horses and Carts placed in the second story of the building, approached by a bridge, as shewn in the Elevations Nos. 54. and 55. As this bridge gives a peculiar air, or character to the building, it is here introduced as an approach to the principal story of the dwelling, the lower story contains a Kitchen, and Milk-house or Dairy, with a Parlour and Bed-room above, and two Bed-rooms in the roof. The large projecting Roofs, and external Galleries, are here presented, so characteristic of this peculiar style of building.



Above the Parlour & Bed Room are two more Bed Rooms

The Kitchen is under the Parlour & the Milk House or Dairy under the Bed Room

DESIGN, No. XV.

In making provision for the aged and infirm, it is pleasing to render their Cottages, or humble habitations, objects of interest, not only as the dwellings of retired domestics whose faithful services claim an occasional visit, but as picturesque features in the landscape, upon which the eye rests with satisfaction, as the modest gable appears in view. The architectural appearance of the building is no doubt a secondary consideration, but when effect can be produced by simple means, and at a moderate expense, this double interest is created. It is fair also to urge that an Ornamental Cottage is kept with more care and attention; that all unseemly objects are more studiously put out of sight, and that the habits of the Cottager himself are thus improved and rendered more pleasing than those of his neighbour who resides in the less inviting dwelling; from the latter we turn with disgust; the muck heap at the door, and the idle children wallowing in their own filth, are not very tempting objects to the patroness, who delights in

decency and good order. In erecting Almshouses, these feelings are more particularly excited, as in a congregation of many persons, cleanliness, decency, and good order, must be essential. With few exceptions, buildings of this description are erected without care or attention as far as applies to appearance, yet the foregoing observations have in this case still greater weight, as whatever can add to the comfort of the individuals for whom the building is destined, must be a matter worthy of consideration. If then a good plan be adopted, with an Elevation of some interest in its general outline; if the whole be constructed with care, consequences the most important to the welfare of the inhabitants will follow. The little gardens will be trimmed with attention, the woodbine and ivy will be trained round the mullioned window, inviting a nearer approach, and the interior will present a well arranged system of comfort and cleanliness. The pleasure arising from occasional visits to the aged dependant, will be repaid by new attention on her part, and the dwelling will eventually become a little picture of pride and satisfaction to both parties, produced by feelings flowing from different sources.

The present Number contains a Design for a Court of Almshouses, the plan (Plate 57) showing the proposed outline. It comprehends

thirty-four separate dwellings, each consisting of a Kitchen and Parlour, with two Bedrooms above; the approach is by a central gateway into an interior Court, surrounded by an Arcade, or Cloister, affording access to the several apartments. At each angle of the building is a small Court, containing sheds for fuel, and such objects as should be kept out of sight; the large Area or Court being laid down with grass, intersected by walks, with a fountain in the centre; opposite to the entrance Gateway, a Chapel is planned, with seats sufficient for the whole community.

The following is a List, and description of the Plates.

No. 57. Plan of the Quadrangle.

58. Front Elevation.

59. Elevation for one side of the interior Court.

60. Perspective View of the Building.

61. Plan of the Chapel.

62. Elevation of the Chapel.

63. Geometrical Section.

64. Interior of the Chapel in perspective.

DESIGN No. 15.

London. Pub.d by Carpenter & Son. Old Bond Street. April. 1828

DESIGN, No. XV.

The three first Plates of this Number complete the Design for the Court of Almshouses. They are numbered as follow:—

No. 65. Plan of the Entrance Gateway.

66. Perspective View through the Gateway.

67. Perspective View of the Quadrangle.

The fountain in the centre of the Quadrangle, is designed after the font in Walsingham Church, Norfolk, justly celebrated for its beauty.

The specimens of ornamental Chimney Stacks, given in Plate 68, are selected from those at St. Cross, near Winchester, and Hampton Court Palace. The Chimney Stack was originally a feature of considerable importance, and great care was displayed in its construction; very beautiful specimens may be found at East Barsham Hall, in Norfolk; at Eton College, in Buckinghamshire; and at Hengrave Hall, in Suffolk.

DESIGN, No. XVI.

A Boat House may without much difficulty or expense be rendered a pleasing object in park scenery. In order to add to its effect, a small building is here proposed to be erected over it, comprehending a Fishing Cottage, with a Gardener's Room, and a Rustic Seat;—a terrace wall bounds the Lake, and from each side of the Boat House, steps ascend to the Garden. The Design is explained by the following Plates.

No. 69. Plan of the Fishing Cottage.

70. Elevation towards the Lake.

71. Side Elevation.

DESIGN, No. XVII.

The Plate, No. 73, exhibits the plan of a Cottage, erected as a Gate Lodge. It contains a Parlour, fourteen feet square, with a Kitchen, fourteen feet by twelve, a Porch, Dairy, and Woodhouse, with two rooms above. The detail of the Ornamental Barge Boards and Pendants will be given in a subsequent number.

A very elegant Gate Lodge has recently been erected by the Bishop of London, at Fulham Palace. It is the production of an amateur, and displays good taste throughout. The Gentleman who composed the Design is entirely unknown to the author of the present work, and he therefore more freely offers his meed of praise, in noticing a composition so far superior to similar efforts of the present day.

The Design, No. 17, is explained by the following Plates:—

No. 73. Plan of the Gate Cottage.

74. Front Elevation.

75. Side Elevation.

76. Perspective View.

DESIGN, No. XVIII.

Many successful attempts have been made in erecting Ornamental Dairies, and various places might be named, where a walk to the Dairy is rendered interesting by the simplicity or beauty of its architecture. The first named character is perhaps best suited to a building of this description, and the Design, No. 18, is conceived with this feeling. The windows should be glazed with painted glass, the floor paved with marble, and a shelf of the same material for the milk coolers; these should be of Wedgewood's ware, and the sides of the room from the dresser to the cornice may be finished with small tiles of the same manufacture, with ornamental borders. In the centre an antique tazza on a pedestal, may be placed with good effect.

The Plates are numbered as follows:—

No. 77. Plan.

78. Elevation.

79. Side Elevation.

80. Perspective View.

DESIGN IV. B.

London Published by Carpenter & Son 8 Bond Street

The Plates No. 81 and 82, explain the detail of Ornamental Barge Boards, with the Pendants and Springers. These give a peculiar air of richness to a gable, and as the barge boards are merely cut off a deal two inches in thickness, the expense is not a material consideration, unless the pattern is very intricate. The Designs here given are applicable to Ornamental Dwellings; for Labourers' Cottages the figure cannot be too simple, examples for which may be seen in Designs No. I. and II.

The Pendants are octangular on the plan, and much variety may be introduced in forming them.

DESIGN, No. XIX.

In applying Cottage Architecture to a residence, much care is necessary in preserving the simplicity of the component parts, or the idea of the cottage will be lost in the magnitude of the building. The term indeed is barely applicable but to dwellings on a very moderate scale, and any endeavour to apply the character to larger edifices has invariably failed, excepting where the architect has produced the appearance of a cluster of cottages. The Plate No. 83, shews the plan of a House erected a few years since by the Author of the present work, where an attempt was made to create a Gentleman's residence, upon a scale sufficiently large to acquire the ordinary conveniences, without allowing the building to assume too much importance. It consists on the ground plan of an entrance Porch and Hall twelve feet square, an Eating Room seventeen feet by fourteen feet exclusive of the bow, and of the recess for the sideboard; a

Drawing Room eighteen feet by fifteen feet, and Library seventeen feet by twelve feet exclusive of the bow in each room; the upper floor contains four Bed Chambers. The Offices (not shewn on the plan) consist of a Kitchen and Scullery, with Larders; a Servants' Hall, with five Bedrooms over. The Plates 84, 85, and 86, exhibit the Elevation of three Fronts. No. 87 is an Elevation and Profile of the Porch, and No. 88, a perspective View of the Building.

DESIGN, No. XX.

As a conclusion to the present work, and in order to give another specimen of Rural Architecture applied to a residence, the following eight plates are given. The Design, No. 20, was erected a few years since in Surry, and although the Cottage style has been adopted, or rather that perhaps of the ancient Manor House (for it can hardly from its size be denominated a Cottage), it has internally been arranged with every attention to comfort, and perhaps elegance. The Porch, of which the Plate, No. 89, gives the plan, is eight feet square; it is groined, or vaulted, and the floor is paved in imitation of an ancient tessellated pavement. The Elevation and Interior of this Porch is explained by the Plate 90, with the parts of the building connected. The Hall is twenty-one feet by thirteen feet, and twenty-three feet high, being the whole height of the building; it is vaulted, with a gallery across the end. The Drawing Room is thirty-seven feet in length by seventeen in width, exclusive of the bay windows; this room is in two compartments; the bay windows are deeply recessed, being six feet in depth. The Eating Room is twenty-four feet by seventeen

feet, the Billiard Room twenty-one by fifteen feet, both exclusive of the bay windows. The Library is octangular, fifteen feet in diameter, with a circular vestibule twelve feet in diameter opening into a Conservatory thirty feet by fifteen feet; the Staircase is fifteen feet by thirteen feet.

The Chamber Story contains five rooms, with Dressing Rooms. The Offices consist of a Kitchen and Scullery, Housekeeper's Room, Store Room, Servants' Hall, and Butler's Pantry. The Ground Plan of the House is shown in Plate, No. 93.

The Plates 94, and 95, exhibit the geometrical Elevations; and 96, the perspective View of the whole.

It will appear from the foregoing account of the number and size of the apartments, that this building is of some extent. The Elevations will show the effect it produces; in some points of view it scarcely assumes more than the appearance of a Cottage.

The Plate, No. 91, is an Elevation of the Gardener's Room and Sheds. No. 92, that of the Dairy.
